Noua apariție a diabetului de tip I după vaccinarea cu ARNm COVID-19. Cetoacidoza diabetică cu potențial fatală la copiii cu vârsta cuprinsă între 5 și 12 ani

Adulții aproape mor după ARNm; 16 cazuri

28 septembrie 2023 – Femeie australiană de 36 de ani, vaccinată de patru ori cu primele două injecții de rapel cu AstraZeneca și două Pfizer COVID-19 mRNA – aproape a murit de diabet zaharat de tip 1 nou și cetoacidoză diabetică la 7 săptămâni după cel de-al doilea vaccin Pfizer și al patrulea vaccin COVID-19.

I was a fit and active person prior to having the 🦠 and the only health issue I had was endometriosis which was being managed under the expert care of a gynaecologist. I have undergone a couple of laparoscopic surgeries in the past to assist with this issue.

My employer mandated 🦠 with three being the minimum required and the fourth being strongly encouraged. At that stage I had no particular view about the 🦠 as I had not done any research and had not heard of any 🦠-related injuries.

I had my first 🦠 in March 2021 and experienced no side effects.
I had my second 🦠 in June 2021. Immediately after the second 🦠 my periods stopped completely for over three months. This was highly abnormal as, due to my endometriosis, I would commonly have a period every two weeks.

I saw my gynaecologist who scheduled another laparoscopic surgery. She was shocked to discover that the endometrial tissue had spread all over my bowel and bladder, something which is highly unusual and quite serious.

At that stage, I did some research and started to suspect that the 🦠 had caused this rapid escalation of my endometriosis and decided not to have another 🦠. Instead, for my 🦠 which I had on 3rd of December 2021, I elected to have the 🦠. After the 🦠 I started experiencing strange symptoms including neck and throat pain, and severe abdominal cramps. When I saw my GP, she arranged for a scan of my thyroid. This showed a lot of inflammation, but she had no other idea what the problem could be.

I arranged for my father come over to drive me to the clinic to get the prescription. When he arrived he took one look at me and said, "You need to go to hospital, you look awful". I waved that off and he took me to the doctor who gave me an intramuscular injection for the gastro. After that, my father kept insisting that I should go to the hospital and eventually I gave in and let him drive me there.

After a three hour wait, I was eventually seen but was not happy with the way my case was handled. I did not think that they showed appropriate concern for my wellbeing.

They admitted me for tests and later that night (25th August) they diagnosed me with diabetic ketoacidosis. This condition arises when the body breaks down fat to use for energy. Breakdown of the fat releases ketones, which can build up in the blood and cause it to become acidic. It is a very serious complication of Type 1 diabetes.

I was released from hospital on 6 September 2022 then took an additional two weeks off work to recover and start getting used to my dramatically altered life.

My new daily routine includes constant

 jab_injuries_australia

 jab_injuries_australia Due to the nature of her employment and her fear of any reprisals, this person wants to remain entirely anonymous.

Her employer mandated three 🦠 and 'strongly encouraged' the fourth. Because she had no preconception of their safety or otherwise, and to keep her job, she complied.

After the second 🦠 she started to notice unusual health symptoms and realised that something was not right. [Now this previously fit and healthy 36-year-old's life is dramatically changed](#)

She wants to tell her story to raise awareness that 🦠 injuries are very real and also to highlight her injury is one that has not been widely reported.

If this story resonates with you or anyone you know, leave your comments as she would be most interested to know about other similar cases.

Po

On the 4th of July 2022, I went for my fourth 🦠 (P). I left to go overseas on holiday the following day and while I was on holiday, I experienced more strange symptoms. These included:

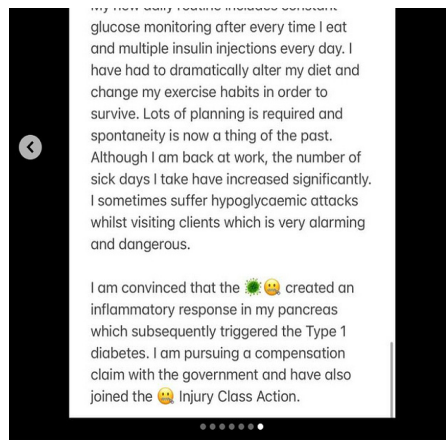

- fatigue requiring me to have daily naps
- abdominal and chest pain
- shortness of breath
- excessively dry mouth
- dizziness and blurred vision

Since I was in a foreign country at the time, I put these symptoms down to a change in diet, possibly a reaction to my acne medication or maybe low iron. The extreme dry mouth caused me to drink a lot more than normal and subsequently urinate more as well. When I returned from overseas, I booked a GP appointment.

On the 24th of August I started vomiting violently and I changed my GP appointment to a telehealth call as I felt too unwell to leave the house. She suggested that I may have gastro and she asked if I wanted her to send me a script or whether I would be able to go to collect it. I opted to go to collect it.

The doctor told me that if I had not been young and fit, and if I had delayed getting diagnosed by even one more day, I would likely have died. Blood tests showed that my renal (kidney) function was all over the place. It is very rare for a healthy adult to suddenly develop diabetic ketoacidosis without warning. It usually needs to be triggered by something. In my opinion, this trigger was the 🦠.

I was placed in ICU in a very precarious state of health and remained there for five days before returning to a ward for a further eight days. I met with an endocrinologist while in hospital. She stated in writing that as there was no family history of diabetes or autoimmune disease, and because the onset of the Type 1 diabetes matched up with the time frame of my 🦠, there was a possibility that my condition was caused by the 🦠. She was however, deliberately vague in this quasi admission. The hospital discharge paperwork also drew no conclusions and merely documented the timeline of the 🦠 versus the onset of the diabetes.

VAERS ID 1443487 – băiat de 12 ani

- Un băiat de 12 ani din Tennessee a primit două doze de ARNm Pfizer
- La o zi după a doua doză de Pfizer și la 23 de zile după prima doză de Pfizer, a prezentat urinare excesivă și simptome de hiperglicemie, a fost diagnosticat cu diabet zaharat de tip 1.
- afecțiune descrisă ca „pune viața în pericol”

În studiul Moderna pentru copii – copilul de 1 an face diabet de tip 1

- **21 octombrie 2022** – Alex Berenson a raportat în Substack despre Studiul pentru copii Moderna COVID-19 ARNm Vaccine, care a înregistrat o **fetiță de 1 an care dezvoltă diabet de tip 1 și cetoacidoză diabetică** la 37 de zile după a doua doză de Moderna, [la pagina 62](#)
- „celălalt SAE [eveniment advers grav] considerat legat a fost **diabetul zaharat tip 1 nou debut și cetoacidoza diabetică la o femeie de 1 an raportate la 37 de zile după doza 2.**”

Literatură

Ianuarie 2023 – Hyeyeon Moon și colab. – Dezvoltarea diabetului de tip 1 la adulți după vaccinarea ARNm COVID-19

- Japoneza 56F a avut două doze de ARNm Moderna
- două luni mai târziu, a prezentat un istoric de 1 săptămână de sete, polidipsie, poliurie și pierdere în greutate.
- A fost diagnosticată cu diabet de tip I

2022 noiembrie – Rong Lin și colab. – Diabet zaharat de tip 1 fulminant după vaccinarea SARS-CoV-2: un raport de caz

- Femeia din Taiwan 39F avea 3 vaccinuri ARNm Pfizer.
- La 14 săptămâni după al treilea ARNm Pfizer, ea s-a prezentat la spital cu greață și vărsături severe de mai multe ori pe zi, de asemenea, dispnee și palpitații
- fusese internată recent cu cetoacidoză diabetică
- **A fost diagnosticată cu cetoacidoză cu diabet zaharat de tip 1.**

Octombrie 2022 – Kobayashi și colab. – Diabetul de tip 1 fulminant atipic de nou debut după vaccinarea COVID-19: raport de caz

- Japonezul 59M a avut a doua doză de ARNm Pfizer
- a fost internat la spital din cauza oboselii generale la 15 săptămâni după a doua doză de Pfizer
- a avut vărsături, agravarea oboselii, dificultăți în mișcările corpului
- transportat la UR cu hiperglicemie, gaze sanguine prezentând acidoză severă, deshidratare, insuficiență prerenală
- a fost diagnosticat cu cetoacidoză diabetică de tip I

2022 iulie – Aydogan și colab. – Diabet zaharat de tip 1 în urma vaccinării ARNm SARS-CoV-2

- Cercetătorii turci raportează 4 cazuri de diabet zaharat de tip 1 în săptămânile după vaccinarea cu ARNm Pfizer
- 56M a avut două ARNm Pfizer – la 15 zile după al doilea Pfizer a avut oboseală, poliurie, a pierdut 5 kg, cetonurie, dar nu acidoză
- 48M a avut două ARNm Pfizer – la 2 luni după al doilea Pfizer a avut oboseală, HbA1c ridicat
- 27F a avut două ARNm Pfizer – la 3 săptămâni după ce a apărut al doilea Pfizer cu vedere încețoșată, poliurie, polidipsie, scădere în greutate
- 36M a avut două ARNm Pfizer după 2 doze de CoronaVac – a slăbit 10 kg în 15 zile, a fost internat la urgență cu oboseală, amețeli, gură uscată

- Teorie: „mimica moleculară între antigenele SARS-CoV-2 (proteina vârfului) și proteinele țintă umane poate fi unul dintre posibilele mecanisme de bază ale autoimunității insulelor induse de vaccinul SARS-CoV-2” .
- „Poate exista un atac ușor și tranzitoriu asupra celulelor β pancreatice indus de vaccinurile SARS-CoV-2 prin mimetism molecular.”

Februarie 2022 – Sakurai et al – Diabet zaharat de tip 1 ca urmare a vaccinului pe bază de ARN COVID-19

- Japoneza 36F a avut prima doză de ARNm Pfizer
- s-a prezentat la spital cu antecedente de 7 zile de sete, polidipsie, poliurie, palpitații, pierderea poftei de mâncare, oboseală care a început la 3 zile după primul Pfizer.
- a fost diagnosticată cu diabet de tip 1 și cetoacidoză diabetică și a fost internată la spital.
- Autorii citează o lucrare a lui [Kanduc și colab](#) : „ **Mimetismul molecular între glicoproteina cu vârf SARS-CoV-2 și proteomii mamiferelor: implicații pentru vaccin**” ca o posibilă explicație

Februarie 2022 – Sasaki et al – Diabet fulminant de tip 1 nou debut după vaccinarea împotriva coronavirusului 2 cu sindrom respirator acut sever: raport de caz

- Japoneza 45F a avut prima doză de ARNm Pfizer
- La 8 zile de la vaccinare a fost trimisă la spital cu hiperglicemie, slăbise 6 kg de la vaccinare, avea acidoză metabolică și **cetoacidoză diabetică**.

2022 ianuarie – Sasaki et al – Diabet de tip 1 nou dezvoltat după vaccinarea bolii coronavirus 2019: raport de caz

- Japoneza 73F a primit două doze de ARNm Moderna – la 4 săptămâni după a doua vaccinare controlul glicemic a început să se deterioreze
- La 8 săptămâni după ce a doua Moderna a fost diagnosticată cu diabet zaharat de tip 1, puternic pozitiv pentru autoanticorpi

2022 – Yano și colab. – Diabet de tip 1 cu debut nou după vaccinarea ARNm COVID-19

- Japoneza 51F a avut prima doză de ARNm Moderna
- a observat o scădere în greutate de 3 kg și a vizitat medicul la 12 zile de la debutul simptomelor
- she was referred to hospital 6 weeks after 1st dose of Moderna with tachycardia, dehydration, metabolic acidosis and ketonemia, and was diagnosed with diabetic ketoacidosis.

My Take...

One of my favourite Twitter accounts, Ethical Skeptic, [published Today, Oct.3, 2023](#) an update on **USA All Cause Mortality in ages 0-24**, which is now at an ALL TIME HIGH since the COVID-19 mRNA Vaccines rolled out, with a **42% excess mortality**:

This is exactly what I'm seeing on the ground level. Young people, in this case ages 0-24 which includes children of all ages, are dying at a **RECORD LEVEL** since the pandemic started!

As I'm going to take a bit of a break from the COVID-19 Vaccine Turbo Cancers killing young people, it is worth asking what else might be contributing to these deaths?

Beyond the heart attacks and the blood clots, there are all types of auto-immune diseases caused by COVID-19 mRNA Vaccines and the endless immune system aberrations that may be contributing to "mysterious deaths" of young people.

TYPE 1 Diabetes and Diabetic Ketoacidosis. This is one of them.

"The doctor told me if I had not been young and fit, and if I had delayed getting diagnosed by even one more day, I would have likely died." – 36 year old quadruple COVID-19 Vaccinated Australian woman who ended up in Diabetic Ketoacidosis 7 weeks after her 4th COVID-19 (Pfizer) Vaccine.

How many children and young people have died (from Type 1 Diabetic Ketoacidosis) because they did not seek medical attention in time?

It is interesting to note in VAERS that all the cases of COVID-19 mRNA Vaccinated children getting NEW Type 1 Diabetes diagnosis within weeks of Pfizer or Moderna mRNA Vaccination are **all described as “life-threatening” events**.

Parents need to wake up and do everything they can to get these Pfizer & Moderna COVID-19 mRNA shots taken off the market immediately!

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky's book is a rock upon which to sustain our fight. —Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test – which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. —David Skripac

A reading of Chossudovsky's book provides a comprehensive lesson in how there is a global coup d'état under way called “The Great Reset” that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. —Edward Curtin
